

Linux

This page is not meant to be a full manual on Linux, just a list of pointers to utilities and procedures in use at our institutes. A copy of the [Linux man pages](#) is also available from our web server (not necessarily complete).

See also: [Fedora 23](#) announcement, [Fedora 25](#) announcement, for news and known issues. And [fedora tips](#) for other useful tips.

Files, directories, disks and permissions

- [ACLs](#)
- [Automount](#)
- [sudo](#)

Backup

- [Snapshots](#)
- (other backups, to be described)

Programming, compilers, libraries

- [Introduction to Programming at Leiden Observatory](#)
- [Compilers](#)
- [Python](#)
- [Available libraries](#)

Desktop environment

- [Linux desktop environment](#)
- [Software menu](#)
- [Sfmx login environment](#)

Scientific software

- [Mathematica](#)
- [Mathematical software](#)
- [IDL](#)
- [Astronomical software](#)

Office software

Internet and e-mail

- [Mozilla Firefox](#)
- [Mozilla Thunderbird](#)
- [Email](#) - e-mail setup, filtering etc

Other software

- ...
