

Enroll in DUO

You have to enroll the two factor authentication (2FA) DUO.

The first step in this procedure is that you register yourself in the 2FA system called DUO. For this, login with your PHYSICS account on the WEB-mail, <http://webmail.physics.leidenuniv.nl>

You will now be presented a setup procedure, as show and explained below. Just follow the instructions and you are all set for two factor authentication.

For the time being this will only work for the webmail in order to let you have some experience with the system.

If you have any questions, contact: Helpdesk@Physics.LeidenUniv.nl

Setup Procedure

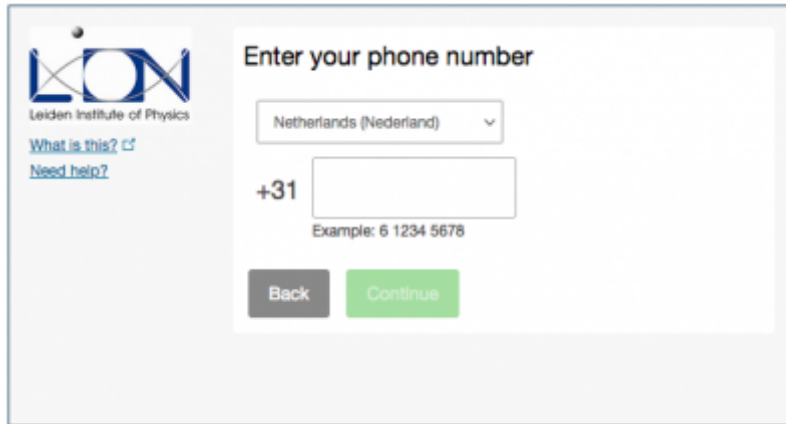

If you have never enrolled in DUO you will be presented a series of windows displayed below. The first window introduces you to the setup procedure.

Click 'Start setup' to continue to the actual setup.

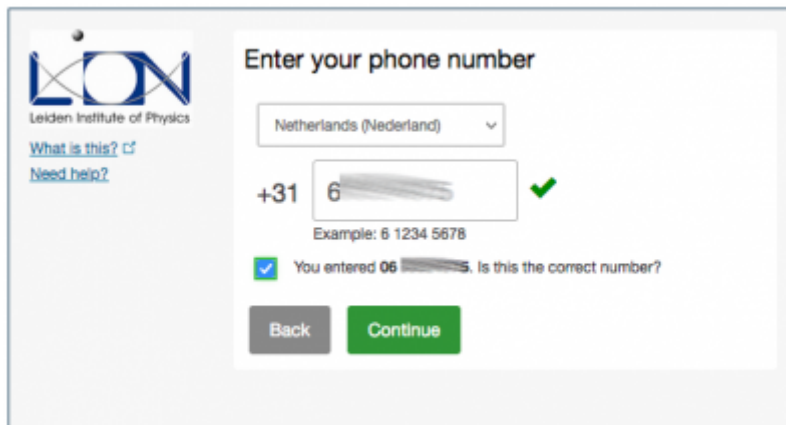

We will setup the most standard situation, where you have a smart phone on which you can install the DUO app. Note that if you own an old Android phone, you must be a version 8.0 or higher. If this is not the case, you will need to ask for a yubikey hardware device from the IT department.

The screenshot shows the LION Leiden Institute of Physics logo on the left. The main heading is "Enter your phone number". Below it is a dropdown menu set to "Netherlands (Nederland)". A text input field contains "+31" followed by a masked number. Below the input is an example: "Example: 6 1234 5678". At the bottom are "Back" and "Continue" buttons.

In order for the DUO system to be able to push login authentication request to your phone, you need to provide your mobile telephone number.

This screenshot is similar to the previous one, but the input field now shows "+31 6" followed by a masked number, and a green checkmark is visible to the right. Below the input, a confirmation message reads: "You entered 06 [masked] 5. Is this the correct number?". The "Continue" button is highlighted in green.

After providing the information you can continue the setup process.

The screenshot shows the LION logo and the heading "What type of phone is +31 6 [masked]?". There are three radio button options: "iPhone", "Android" (which is selected), and "Windows Phone". At the bottom are "Back" and "Continue" buttons.

DUO needs to know about your smart phone operating system since there are slight difference between those systems.

You must now go to the application store appropriate for your phone's operating system and download/install the DUO app.

Once you have installed the app, you can use the + sign in the app to make it read the presented QRCode and let it learn you and our authentication keys.
