

Meetnet Storage Server

The data01 storage server (22 TB) and its backup are at their end of life and a new environment (83TB) is available. We will call it and its backup device data02 for now. Next to the data01 server there was a bulk storage server data03 (34TB used) that was not backed up. Both the old data01 and data03 will be merged now to data02.

For more information in this transition and about the new server look at:

- [Transition howto](#)
- [PI Structure](#)
