

Personal WEB pages

All LINUX server based groups, Observatory and Institute Lorentz, have inside their personal home directory a directory name `public_html`, which is the top level directory of your personal WEBstack. Your personal webstack has a URL link <http://home.INSTITUTE.leidenuniv.nl/~ACCOUNT>, where INSTITUTE is either strw, physics or lorentz and ACCOUNT is the login name you use to access your personal desktop.

In order for the WEB server to read your `public_html` directory you need to set the access rights of that directory to:

```
chmod 711 public_html
```

The WEB server reads in order the `index.php` or `index.html` file as the index to start out serving your WEBstack.
